Breadth-First Search

We assume breadth-first search is implemented as a graph search algorithm with the goal test being applied once after a node is generated, and the successors of any node are generated from left to right, e.g., the successors of A are generated in the order of S and B.

7: Open = G	Closed = ABCSDEF	
8: Open = H	Closed = ABCSDEFG	(if G is goal, stop here. Open = "" Closed = ABCSDEF)
9: Open = ""	Closed = ABCSDEFGH	(if J is goal, stop here.)

Depth-First Search

We assume depth-first search is implemented as a graph search algorithm with the goal test being applied once after a node is extracted from the frontier for expansion, and the successors of any node are generated from left to right, e.g., the successors of A are generated in the order of S and B.
